SUMMARY

Data & Business Analyst and Python Developer with hands-on experience in Python, SQL, Power BI, and LLM-assisted analytics. Builds AI-powered automation tools and delivers measurable business insights through dashboards and data-driven decision frameworks.

EDUCATION

JECRC University

Bachelor of Technology in Computer Science and Engineering; CGPA: 8.1

Jaipur, Rajasthan

2022 – 2026

EXPERIENCE

Pre-Onboarding Trainee (Analyst – A4)

Jan 2026 – Present

Capgemini

- Selected competitively for the Analyst (A4) role out of a national hiring pool at a Fortune 500 enterprise.
- Completing structured, enterprise-grade technical training aligned with client delivery standards.
- Developing proficiency in consulting workflows, data-driven problem solving, and professional communication.

PROJECTS

Noise2Signal | Python, Streamlit, Pandas, Groq API, LLaMA 3.1

Live App | GitHub

- Refactored a single-brand flavor discovery tool (originally built for HealthKart) into a domain-agnostic, multi-vertical product-signal engine, validated across nutrition, consumer tech, and footwear categories with zero changes to the core scoring logic.
- Converted unstructured social discussions into an explainable ACCEPT/REJECT framework using a weighted, four-component KPI model (trend strength, sentiment, brand fit, signal quality) with a grounding/vocabulary-filter safety layer against LLM hallucinations, helping product teams reduce decision ambiguity by ~40% and shortlist high-potential candidates 30–35% faster than intuition-based selection.

AI Code Review Bot | Python, Groq API, LLaMA 3.3, GitHub Actions, REST APIs

GitHub

- Built an autonomous bot that triggers on every GitHub Pull Request and posts AI-generated code reviews instantly, eliminating manual review bottlenecks with zero human intervention.
- Integrated LLaMA 3.3 70B via Groq API to detect bugs, security vulnerabilities, and code quality issues, and automated end-to-end pipeline deployment using GitHub Actions CI/CD.

Netflix Data Analysis | Python, Pandas, Jupyter, Seaborn, Matplotlib, OpenAI API

GitHub

- Analyzed 6K+ Netflix titles across genres, release years, ratings, and regions to identify content and consumption trends using exploratory data analysis.
- Integrated LLM-based summarization to convert analytical outputs into executive-ready insights, reducing manual insight-writing effort by ~40% and improving interpretability.

TECHNICAL SKILLS

Data Analytics: Exploratory Data Analysis (EDA), Data Modeling, Data Cleaning, Trend Analysis, KPI Tracking, Portfolio Analytics, Insight Generation, ETL Processes

Programming: Python (Pandas, NumPy), SQL, NoSQL

AI & LLMs: Prompt Engineering, Explainable AI, AI-driven Decision Systems, GitHub Actions, REST APIs, CI/CD Automation

Visualization & Reporting: Power BI, Tableau, Matplotlib, Seaborn, Reporting Automation, PySpark

Databases: PostgreSQL, MySQL (Joins, Aggregations, Subqueries, Window Functions), MongoDB

Tools & Platforms: Excel, Jupyter Notebook, Git, GitHub, Google Cloud Platform, Linux, A/B Testing, Postman

Interpersonal Skills: Team Collaboration, Problem Solving

ACHIEVEMENTS

Top 20 University Finalist – Smart India Hackathon 2024 (Software Edition).

Core Team Member – Devcrest JU; organized contests and mentorship for a 230+ member coding community.

CERTIFICATIONS

Google Cloud Computing Foundations – Google Cloud
