SUMMARY

Software Engineer (B.Tech CSE, 2026) with a data and business analysis focus, experienced in turning raw data and functional requirements into dashboards, structured workflows, and decision-ready insights. Hands-on with SQL, Python (Pandas), Power BI, DAX, and Tableau, and skilled in requirement gathering, gap analysis, and process documentation. Built a self-serve sales dashboard and a weighted scoring model that reduced decision ambiguity by ~40% and cut turnaround time by 30–35%. Holds IIBA-endorsed business analysis coursework and communicates clearly with technical and non-technical stakeholders.

EDUCATION

JECRC University

Bachelor of Technology in Computer Science and Engineering; CGPA: 8.1

Jaipur, Rajasthan

2022 – 2026

PROJECTS

Noise2Signal | Python, Streamlit, Pandas, Groq API, LLaMA 3.1

[Live App](#) | [GitHub](#)

- Performed requirement and gap analysis to refactor a single-brand tool into a domain-agnostic, multi-vertical product-signal engine, redeployed across three business categories with zero changes to core logic.
- Converted unstructured inputs into a standardized, explainable ACCEPT/REJECT process via a weighted four-component scoring model, reducing decision ambiguity by ~40% and cutting turnaround time by 30–35%.
- Deployed as a live Streamlit app so non-technical teams can run it without code.

AI Code Review Bot | Python, Groq API, LLaMA 3.3, GitHub Actions, PyGithub

[GitHub](#)

- Identified manual code review as a recurring bottleneck and built an autonomous LLM-powered bot that triggers on every GitHub Pull Request and posts AI-generated review comments on bugs, security, code quality, and performance.
- Designed and documented the GitHub Actions pipeline for hands-off, reliable deployment, removing the need for manual intervention on each review.

Mobile Sales Dashboard | Power BI, DAX, Data Modeling

[GitHub](#)

- Built an interactive Power BI dashboard tracking sales and units sold by brand, model, city, and payment method, with a geo map and filters for city-wise performance.
- Wrote DAX measures to analyze monthly trends and seasonality, helping stakeholders monitor performance across regions and identify top-selling brands and models.
- Designed for self-serve reporting so stakeholders can slice the data themselves without ad-hoc requests.

EXPERIENCE

Software Engineer

Aug 2026 – Present

Cappemini

- Engineered an automation framework in TypeScript using Playwright and BDD (Cucumber) with the Page Object Model, replacing repetitive manual work with modular, reusable and repeatable runs.
- Translated functional requirements of a banking application into clear, structured workflows across UI, API, and hybrid (UI-to-API) flows, validating request/response accuracy across services.
- Shipped changes through a Jenkins CI/CD pipeline with Allure reporting, giving the whole team continuous visibility into build status and defects.

TECHNICAL SKILLS

AI & Software Engineering: Python, TypeScript, JavaScript, LLM APIs (Groq, LLaMA), Streamlit, GitHub Actions, Jenkins, Playwright, Git, GitHub, Postman, Google Cloud Platform

Data & Databases: SQL, MySQL (Joins, Aggregations, Subqueries, Window Functions), PostgreSQL, MongoDB, Pandas, NumPy, Data Cleaning, EDA

Analytics & Reporting: Power BI, DAX, Tableau, Excel (Formulas, Pivot Tables), Google Sheets, Dashboards, KPI Tracking, Root Cause Analysis

Product & Business: Requirement Gathering, Gap Analysis, Process Documentation, Stakeholder Communication, Cross-Functional Collaboration

ACHIEVEMENTS & CERTIFICATIONS

Top 20 University Finalist – Smart India Hackathon 2024 (Software Edition).

Core Team Member – Devcrest JU: organized contests and mentorship for a 230+ member coding community.

Deloitte Australia Data Analytics Job Simulation – Forage (June 2025).

Google Cloud Computing Foundations – Google Cloud.

Plan the Project as a Business Analyst (IIBA Endorsed) – Udemy (Oct 2026).

Business Analysis Fundamentals (IIBA Endorsed) – Udemy (Oct 2026).
